Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1, 2, 4, 8, 10, 12-14, 18-22, 31 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Isamu in view of White US 20020052168 A1.

Isamu discloses a method of grinding a ferrous roll having a rotating roll surface with a rotating grinding wheel, the method comprises the claimed method steps that include: mounting the wheel on a rotational spindle and grinding the roll surface and maintaining one or both of the grinding wheel rotational speed and the mill roll rotational speed is varied at an amount of +/- to 40% in amplitude, with a period of 1 to 30 seconds, and the wheel rotational frequency is varied at an amplitude of +/- 20% with a period of less than 5 seconds. Isamu does not specifically disclose a TT to WWC greater than 25°.

White discloses a grinding apparatus in which the TT to WWC is greater than 25° so as to enhance the grinding operation based on the hardness of the surface. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have made the apparatus of Isamu et al. to have made the TT to WWC greater than 25° as taught by White so as to enhance the grinding operation based on the hardness of the surface.
